695	% of personnel hours spent on preventative maintenance	$X = (\text{PM Hours} / (\# \text{ of Staff} \times 173.3)) \times 100$. Run the POM report "Work Order Summary," capture the total number of available staff located on the total line under "# of staff." Multiply this figure by 173.3 (the average number of working hours in a month for 168/176 schedule). Treat this as 'available hours' for the month. Capture the total under 2 for "Preventative Maintenance." Divide the "Preventative Maintenance hours" by the 'available hours,' then multiply the figure again by 100 to arrive at the percentage. The SAPMS report used in this calculation - the "POM" report - does not associate hours worked with the month the work was completed, but rather SAPMS associates the hours worked in the month that the PM work order ticket was closed out. A delay in recording the closure of a ticket or the closure of a number of large, multi-month ticket may introduce some skewing in the percentage. In an extreme case, the hours worked on tickets closed in a given month may exceed available personnel hours. <i>Institution Reported</i>
